

## *Co-management Post Operative Report*

Following uneventful cataract surgery the routine post operative follow up for patients occurs at one day, one week and one month after surgery. As part of a co-management plan a patient may elect for the one month follow up examination to be carried out by his or her optometrist.

For the purposes of auditing surgical outcomes the following information is required for this examination and this documentation will need to be forwarded to St George's Eye Care. If the patient experiences loss of best corrected visual acuity or other conditions that may be considered sight threatening, then contact St George's Eye Care immediately (+64 3 375 6333 or [eyecare@stgeorges.org.nz](mailto:eyecare@stgeorges.org.nz)).
